

For the adventure seekers

Capture the moment to moment thrills...

Adventure seekers seek the element of risk, so let us help you stay safe in the process. *Easy, Efficient, and Affordable* are words to describe Han and Han's new photographic device that set entirely new standards for the photographic process. Used by hundreds of travelers on the go, worldwide, including bikers, skiiers, skate boarders, rock climbers, and more.

Introducing Go Cam: the camera you can wear while mid adventure, even mid air to capture the moment to moment thrills. The camera is small: approximately the size of a hex nut. Placed inside glasses, this camera is barely visible. Inside the hex nut is a photocell that adjusts exposure for a wide

range of illumination. By encorporating concepts of microphotography, Go Cam utilizes a retreivable memory chip located in the hinges of the glasses. In the temple of the glasses is a photo button. A quick push takes the photo, discreetly without a sound, and a photo record is stored inside the memory chip. A white light indicates that the photo was successfully taken. The photo can be viewed in myriad ways: your choice, digitally on a computer screen, projected onto a wall, or developed into a print, and more.
